FOR VERY HIGH RISK / ELEVATED RISK*

The Invacare Flo-tech Solution cushion uses the ultimate combination of a slimmer shaped foam cushion base and a dual layer of gel sacs over the ischial and sacral area. The dual gel sacs and the unique moulded shape of the Solution increases the support surface area. This delivers a superior level of protection for those patients identified as being at Very High Risk / Elevated Risk of developing pressure ulcers, or for those with already established tissue damage.
