### Please follow this measuring method:

The following method is recommended on the basis of extensive practical experience. Deviations are possible in individual instances.

#### Seat width (SW):

- a) For the user: Allow space between sideguard and hip on each side of the chair (approx. 1 - 2 cm altogether)
- b) On the wheelchair: From outside frame tube to outside frame tube.

#### Seat depth (SD):

- a) For the user: When sitting upright: leave space for 2 - 3 fingers between front edge of the seat upholstery and back of knee. (approx. 3 - 6 cm). Care must be taken with adj. upholstery.
- b) On the wheelchair: From back tube to front of seat upholstery.

#### Front seat height:

- a) For the user: When sitting with 90° knee angle:  
From back of knee to bottom of shoe sole.
- b) On the wheelchair: From front of seat tube to the ground.  
(min. 3 cm longer than user measurement)  
Remember to include the cushion height.

#### Rear seat height:

- b) On the wheelchair: From back of seat tube to the ground.  
Note: Max. seat height difference rear to front is 13 cm

#### Back height:

- a) For the user: From the seat, including cushion, to be no more than 1 - 2 cm below the lower shoulder blade.
- b) On the wheelchair: From back of seat tube to upper edge of backrest upholstery.  
Note: The user's ability to sit upright has a major influence on the back height and it can therefore differ considerably

#### Back angle:

Important: The back height depends on the degree of disability.  
0° is the angle 90° to the ground. Negative angles are < 90°  
and positive angles are > 90°.
