please see order form for further information

BREEZY

Elegance

Setting an example, setting the trend

"The new breezy Elegance from Sunrise Medical redefines the word "standard". Whether it is a height-adjustable seat, swing away adjustable footrests, long or short armrests – the Breezy Elegance already has all the fittings mounted as standard. The new chair will convince you with its adjustability and high level of stability."

Individuality is the concept

The new Breezy Elegance will win you over with its optimum functionality, whilst at the same time offering the highest degree of individuality. Without having any additional components, the chair can be adjusted to have 5 different seat heights, 2 seat depths and 2 back heights.

Axle plate

From the lowest seat height of 45 cm to the highest of 51 cm the seat height can be adjusted to meet the individual requirements of the user.

UK Castor

Footplate

With this new standard chair, it almost goes without saying that the height and angle of the footplates can be adjusted and can also be swung in or outwards.

Half folding backrest

The Breezy Elegance comes standard with an easy to operate half folding backrest. The height can be adjusted by simply moving the upholstery up.

Armrest

You're not sure whether a short or long armrest will offer more comfort? No problem! Without the need for expensive accessories the armrest can be adapted to meet individual requirements by simply moving it forwards.

Anti tips

The standard anti tip tubes on the self propel chairs will give you the extra security you need for outdoors.

Design- Everything as standard

The Breezy Elegance is proof that 'Standard' can still be exciting. As well as pioneering fittings, the Breezy Elegance will also impress you with its distinctive look. With harmonious lines, thoroughly integrated parts and the exclusive silver paint finish, all these give the chair a modern, light overall appearance. All this adjustments and even with a maximum user weight of 125kgs it is completely stable.

Elegance

so many adjustment possibilities on the highly-adjustable standard equipment
