

Innovative high level protection and positioning that can be placed in any direction!

With its combination of highest quality moulded HR and visco foams along with a unique silicone-fluid insert the *Invacare Propad Revolve^{Si}* is the perfect planar cushion for people categorized as “high-risk” who are in need of stability and comfort. It performs equally in any direction, making it both reliable and worry-free. Requiring no installation or maintenance, *Propad Revolve^{Si}* is as durable as it is simple to use, making it the ideal alternative for community and nursing care environments.

Fluid and foam advantages

The embedded, non-temperature sensitive silicone(Si) fluid sac envelops protruding bony prominences for superior skin protection and shear management. Top quality moulded HR-foam provides high-level immersion for excellent pressure redistribution. A choice between soft and firm top allows users to choose the type of comfort they prefer.

Visco-elastic inner layer

The *Invacare Propad Revolve* combines an outer-layer of durable moulded HR-foam with a visco-elastic foam inner layer.

The angled base design ensures seamless transition while the visco layer provides high level immersion and pressure redistribution and stabilization in a lightweight package.

Features and Options

Omnidirectional!

The *Propad Revolve* and *Propad Revolve^{Si}* can be used with either side up and rotated in any direction without compromising performance.

Soft Support Visco Layer (*Propad Revolve^{Si}*)

Users can choose between a softer or firmer surface side up.

Welded cover with waterproof zip (optional)

For enhanced infection control.

Platilon liner (standard)

Provides an additional incontinence and infection control layer.
