Molift Transfer Pro

Enhancing seated transfers - empowering mobility

Molift Transfer Pro

A transfer is more than just a movement; it is an essential part of the patient's rehabilitation and the maintenance of physical abilities. Molift Transfer Pro supports safe, dignified transfers while contributing to a healthier working environment for caregivers.

Optimised for seated transfers

Molift Transfer Pro is a sit-to-stand device designed for seated transfers between bed, wheelchair, toilet, and similar surfaces. The user should be able to follow instructions, bear some weight, and maintain core stability.

The device is suitable for use in a wide range of healthcare environments, including hospitals, nursing homes, and home care settings.

Comfort, safety, and usability

Molift Transfer Pro features an ergonomic handle with multiple grip options for both user and carer, supporting a natural movement and allowing easy access to the basin. Stable seat pads provide a secure and comfortable transfer, while the softly padded leg support adapts to the shins for increased comfort.

Easy foot placement is ensured by a low step-on height, sloped edge, and a high-friction footplate. Adjustable leg width, close positioning to the seating surface, and a one-foot-operated central brake with visual and audible feedback contribute to safe and efficient handling.

Attachment points for Molift Assist accessories are located on the side of the handle.

Handle

Multiple ergonomic grip options for the patient and carer, ensuring both comfort and ergonomic positioning of hands.

Central brake

Intuitive one-foot touch central brake, locking both wheels, regardless of their positioning, while also providing both auditory and visual feedback.

Seat pads

The stable seat pads enhance a comfortable transfer for the user. The incut edges provide a good grip, making folding them up and down easy for the carer.

Turning radius

High quality wheels for exceptionally easy manoeuvring meaning minimal force is needed when pushing/pulling the device.

Clinical benefits:

- Reduces work-related injuries or strain on the carer.
- Enables early rehabilitation.
- Comfortable and safe seated transfers.
- Supports the user to use their physical ability.
- Enables single-handed care.

Natural movement pattern

A natural movement pattern refers to the way humans naturally move during everyday activities such as standing up and sitting down. Molift Transfer Pro supports this by allowing the user to place their feet underneath the body and lean forward during the sit-to-stand movement, while the spacious handle supports a stable and ergonomic grip.
