Total price (Not including 5% Surcharge)		£

Please follow measuring method:

The following method is recommended on the basis of extensive practical experience. Deviations are possible in individual instances

Seat width:

a) For the user:

Allow space of side guard to pass vertically between hip and side guard on each side (approx. 1 - 2 cm altogether).

b) On the wheelchair:

From outside frame tube to outside frame tube

Seat depth:

a) For the user:

When sitting upright: leave space for 2-3 fingers between front edge of seat upholstery and back of knee (approx. 3-6 cm). Care must be taken with adjustable upholstery.

b) On the wheelchair:

From back tube to front of seat upholstery.

Back height:

a) For the user:

Measured from the seat, including cushion, to **no more** than one finger (1 - 2 cm) below the lower shoulder blade.

Important! The back height depends on the degree of disability.

b) On the wheelchair:

From seat tube to upper edge of backrest upholstery.

Note: The user's ability to sit upright has a major influence on the back height and it can therefore differ considerably.

Lower leg length:

a) For the user:

With legs angled at right angles, from back of knee to bottom of shoe sole.

b) On the wheelchair:

From front of seat to top of footrest.

Remember: to include the cushion height

Possible seat height settings. **IMPORTANT:** measured without seat cushion!

Std chair 40.5 x 40.5 cm, 0° camber, +5 cm CoG, Seat angle 3°

All changes in the configuration might change the seat heights.
Manufacturing tolerances of +/- 1 cm

Centre Of Gravity (COG)
