

TREKINETIC OPTIONS

Retractable Armrests

Machined out of aluminium with a durable plastic cover, our armrests can be quickly and easily folded out the way for when it's time to get moving.

Folding Handlebars

Machined out of lightweight aluminium with stainless steel clasps and moulded foam grips, our folding handlebars are ideal for those that travel and need the chair to fold down as small as possible.

Locking & Retracting Footplate

An upgrade to our standard footrest, with an easy-to-reach lever to retract and lock the footplate in position. Ideal for those that want ultimate control.

Spare Rear Wheel

Quick release spare rear castor in case of puncture. Available in both mountain bike and smooth tyre tread. This is also included within the Safari Kit.

TREKINETIC OPTIONS

Foam Cushion

A highly breathable 50mm comfort cushion made from CMHR foam with a Dartex cover. A popular choice for anyone that doesn't need a specialist cushion.

Safari Kit

Nylon pouch and support plate containing puncture repair kit (spare inner tube, tyre levers and pump). Can also be used to store spare Ni-MH battery.

Handlebar Extension (Std)

13cm handlebar extension made from lightweight aluminium with foam grips for assistant use. Height adjustable.

Handlebar Extension (XL)

25cm extra long extension made from lightweight aluminium with foam grips for assistant use. Height adjustable and can house assistant brakes for K2.

TREKINETIC OPTIONS

Dynamic Brakes (K2 Only)

Our unique dynamic braking system means you can slow, stop or even turn the chair without so much as touching the wheels. They can also be used as a parking brake for when you want to get in or out of the chair.

Head/Neck Rest

Available in two styles, dependent on whether you need just head or head and neck support. With 3-way adjustment and locking clamps to keep you secure and comfortable all day.

Water Bottle

Our water bottle holder is machined directly into the rear strut to keep your bottle secure and available all day.

Colour Seat

The colour of the seat can be customised in over 200 colours, all with a high gloss durable finish. Just in case carbon fibre isn't your colour.

TREKINETIC OPTIONS

Hyperforma Seat Insert

Using a modified version of the Burnett seating system, our unique Hyperforma seat attaches to our 16" or 19" carbon fibre seats to make them more comfortable for children, people suffering from Scolios and many other use cases.

Growth Kit

Our chairs are designed to be extremely comfortable. Our growth kit raises the standard footplate to ensure we have the perfect leg support for all ages and needs. This can easily be changed as needed, further down the line by adding or removing the spacers.

Attendant Joystick (GTE Only)

The joystick on the GTE can be handlebar mounted for assistant use. We can also wire in both an assistant joystick and a user joystick on the armrest for dual control.

Spare Battery/Charger (GTE Only)

Additional Nickel Metal or Lithium Ion batteries can be purchased at time of order or further down the line, with or without a charger. Only the Nickel Metal battery can be stored in the Safari kit.

TREKINETIC OPTIONS

Tyres

All Trekkinetic chairs use pneumatic 24" tyre. Choose smooth or mountain bike tyres as standard, or upgrade to extra-wide whitewall or blackwall tyres, which are extra wide and great for the beach. Spare sets of wheels are available if required.

Lap Belt

Pelvic stabiliser providing stability and flexibility with adjustable straps that can pivot either forward or back for easier transfers.

Heel Loops

Heel support to keep feet from sliding backwards. Typically partnered with toe loops to secure feet to footplate. Useful on more bumpy terrain!

TREKINETIC OPTIONS
